

Choice of Alternating Gray Grid Lines

In version 14 SFH enhanced the visual effect of grids by alternating lines between gray and white. This new feature allows you to toggle off, or back on, the alternating gray and white grid lines.

Please Note: This feature works at company level only, not user level. So, if you turn off the alternating gray and white grid lines, then it will be off for all users.

How it works:

1. Launch Software for Hardware and from the Logo screen click the *File* menu selection.
2. Click *Optional Settings*.
3. Select *Company*.
4. The Company Options screen will appear.
5. To turn the feature off, in the *Functionality* section check the box entitled *Disable Alternating Gray Color on Display Grids*.

6. Click the *Save* button and open any screen with a grid. You should see an all white grid. See example below:
